1  # padb-tools Training - Setup Checklist
2
3  One page. Do this *before* the session so you can follow along live through all three
4  tutorials (Tutorial 1 - PADB Simple, Tutorial 2 - PADB Interactive, Tutorial 3 -
5  `~/padb-tools`).
6
7  ---
8
9  ## 1. Prerequisites (once, on your own machine)
10
11  - [ ] **PADB-R.NET** installed at `C:\Program Files\KEYSIGHT\PADB-R.NET\PADB-R.exe` (ask
12  IT if missing)
13  - [ ] **Oracle DB / VPN access** - PADB-R.exe extracts live from Oracle; you need real
14  connectivity, not just the app installed
15  - [ ] **Python** on PATH (`py --version` works in a terminal)
16  - [ ] Install the packages every script needs:
17  ```
18  py -m pip install pandas numpy matplotlib scipy plotly flask
19  ```
20  - [ ] **Claude Code** installed and working, if you plan to follow Tutorial 3 (
21  `~/padb-tools`)
22
23  ## 2. Get your own clean copy of the tools
24
25  The shared `Padb\Data` folder most of us use day-to-day is genuinely busy (100+
26  pods/jobs) - not a good place to learn on. Set up an isolated sandbox instead:
27
28  - [ ] Copy the whole `tools` folder to **`C:\temp\tools`** (a plain folder copy - no
29  install step). Source:
30  `\\srsnas01.srs.is.keysight.com\prod\MIDRF3\SG6311A\padb-tools\tools`
31  - [ ] Create an empty folder: **`C:\temp\data`**
32  - [ ] Create (or edit) this file - note it's always in this *exact* location regardless
33  of where you put `tools`:
34  ```
35  %USERPROFILE%\OneDrive - Keysight Technologies\Documents\Padb\padb_config.json`
36  ```json
37  { "data_dir": "C:\\temp\\data" }
38  ```
39  This one setting redirects every script (web app, CLI, scheduler) to treat
40  `C:\temp\data` as home - your own sandbox, isolated from everyone else's.
41
42  ## 3. Get the tutorial pods
43
44  The 3 tutorial pods (+ their `.sao` companions) ship inside `tools\tutorial\` - already
45  there from step 2, no need to ask anyone for files. Just copy them into your sandbox:
46
47  > **Note on `.sao` files**: not required to generate data/plots through our tools -
48  `padb_run.py` extracts via Oracle regardless (`.sao` is PADB's own *output*,
49  written/refreshed after extraction, never read as an input by our pipeline). They're only
50  needed if you want to open a pod **directly in PADB-R.exe's own GUI** to inspect it
51  outside our tooling.
52
53  - [ ] Copy everything from `C:\temp\tools\tutorial\` into `C:\temp\data`
54
55  ## 4. Launch the web app once, to confirm it all works
56
57  ```
58  py C:\temp\tools\webapp\padb_web.py (there is also a batch file, Start_web.bat that
59  starts up the browser app)
60  ```
61
62  This opens `http://127.0.0.1:5000` in your browser. Confirm:
63  - [ ] The page loads with no errors
64  - [ ] Dropping `MaxPowerTutorial1.pod` onto the page shows its analytics (6 rows) - if
65  this works, extraction/plotting will too
66
67  ## 5. What each tutorial will actually ask you to do

```

```
51 | | Mode | Pod | What you'll do |
52 |---|---|---|---|
53 | Tutorial 1 | PADB Simple | `MaxPowerTutorial1.pod` | Drop pod → Generate Job (mode:
54 | Tutorial 2 | PADB Interactive | `MaxPowerTutorial2.pod` | Drop pod → Generate Job
55 | Tutorial 3 | `/padb-tools` | `MaxPowerTutorial3.pod` | Open Claude Code in
56 | `C:\temp\tools`, ask it questions about the pod via `/padb-tools` – no web app needed for
57 | this one |
58
59 If steps 1-4 above are done, you're ready to follow along live for all three.
60
**AMC2 variants**: `tutorial\` also includes `-AMC2` versions of each pod (Malaysia site)
– used only if we demo the site-conversion feature (Convert Selected / Convert Pod). Not
needed for the core 3 tutorials above if AMC users have access to Santa Rosa PADB data.
```
